PROFESSIONAL SUMMARY

BCA graduate with hands-on experience in operations monitoring, compliance reporting, and software testing. Tracked alarm status and compliance in a 24x7 environment, escalating issues through defined hierarchies, coordinating with field teams, and maintaining daily Excel-based reporting. Complemented by manual and automation testing skills (Java, Selenium WebDriver, TestNG) and independent web application security testing experience (Burp Suite, Linux, networking fundamentals). Reliable with SOPs, cross-functional coordination, and accurate documentation — comfortable in both operations/support and technical/testing environments.

TECHNICAL SKILLS

Operations & Coordination: Alarm/Compliance Monitoring, Escalation Management, Cross-Team Coordination, Reporting (MS Excel)

Manual Testing: SDLC, STLC, Test Case Design, Functional Testing, Smoke Testing, Regression Testing, Defect Life Cycle

Automation Testing: Selenium WebDriver, TestNG, Maven, Page Object Model (POM)

Programming & Database: Java, SQL, JDBC

Platforms & Tools: Linux, Networking Fundamentals, Burp Suite, Git, GitHub, MS Excel

PROFESSIONAL EXPERIENCE

FMC Executive

Aug 2025 – Dec 2025

Towerone Infratech LLP, Chennai

- Monitored telecom site power backup alarms (EB/DG/Battery) hourly via a web-based dashboard across the South Cluster, escalating issues through a defined call hierarchy and posting real-time updates to a WhatsApp group.
- Tracked daily alarm compliance and login status across sites, reporting on the Daily Fault Tracker (DFT) via email and WhatsApp.
- Coordinated with field technicians via a separate reporting portal to verify alarm functionality, downloading and consolidating data into 3 Excel-based tracking templates.
- Maintained accurate documentation and reporting across daily operational templates using MS Excel.

Independent Security Researcher (Bug Bounty)

During College

HackerOne & YesWeHack Platforms

- Conducted independent web application security testing on public bug bounty programs using Burp Suite, applying Linux and networking fundamentals for reconnaissance and analysis.
- Identified and responsibly reported a sensitive data exposure issue on a live production web application, documenting the finding, business impact, and reproduction steps in a formal vulnerability report. Built practical, self-taught skills in HTTP traffic analysis, API endpoint testing, and vulnerability triage.

PROJECTS

AI Test Engineering Platform (Personal Project)

- Built a Java 17 QA automation framework that analyzes requirements, generates AI-assisted test scenarios/test cases, and exports enterprise Excel test design reports (16-sheet workbook: requirements, traceability, risk coverage, test cases, execution summary, etc.).
- Implemented UI automation using Selenium 4, TestNG, and the Page Object Model; API testing with REST Assured; and database validation via JDBC against H2.
- Integrated DOM analysis and self-healing locator logic to support automated test generation, and Apache POI for programmatic Excel report generation.
- Set up CI/CD with Jenkins and containerized test execution with Docker; generated execution reports via Allure and managed source control using Git and GitHub.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Ramakrishna Mission Vivekananda College, Chennai | CGPA: 6.9/10

Higher Secondary (Class XII)

2021 – 2022

Dr. G.M.T.T.V Higher Secondary School, Chennai | Percentage: 65%
